Sabrina,

There is a high priority EPA project that is potentially going to occur between June 6 and June 17 that is going to tap a lot of our field staffing ability. Both Nate and I are scheduled to work on the project. If the project starts on time and finishes by the 19th, getting two START people out to Silverton the week of the 20th will be possible. The hitch would be if the project started late and we were still working through the week of the 20th. The project is being managed on the EPA side by Craig Myers, so any details (or uncertainty) on the schedule might be better discussed with him. I know he is depending on some external factors to get the project rolling, so there is some difficulty in pinning down exact dates.

In the meantime I will discuss the HRS data gaps with Barry and formulate a strategy for filling those during a June trip. I think right now we are looking at further documenting direct observation of a release, documenting a food chain individual (potentially working with Trout Unlimited in Durango), and firming up our wetlands documentation beyond the NWI maps.

I will keep you as up to date as possible on our scheduling status.

Thank you,

Megan J. Adamczyk

Subject sampling in Animas/Cement Creek

All, due to the Regional lab staff schedules I would like to have one to two START staff support the water quality sampling work the week of June 13 or June 20. It would be combined with work Steve Way needs done in the watershed too. I need to figure out some details with Bill Schroeder to get the bottles, coolers, etc. to START staff, but I would like to get this figured out as soon as possible. I don't know if Megan or Barry have identified any HRS data gaps that might be filled during this mobilization, but we should talk about that as a possible objective as well.

Sincerely,

Sabrina Forrest
